

MLB Picks & Analysis Log — June 26, 2026

Session date: Friday, June 26, 2026

Tools used: Baseball-Reference (BvP, previews), RotoWire (weather), FanDuel/ESPN/NBC Sports (odds), Covers/Lineups.com/SI (props/social), Breakaway Stats (streaks)

MONEYLINE PICKS (ranked by conviction)

PICK 1 — WSN Nationals +120 vs BAL Orioles

Conviction: HIGH (after BvP upgrade)

Line at time of pick: WSN +120, BAL -142

My win probability: 57% | **Market implied:** 45% | **Edge:** +12%

Key reasons:

- Trevor Rogers ERA 5.30, 4-7 — worst starter matchup on the board
- Andrew Alvarez ERA 3.34, 1-0 — undervalued
- 85°F + wind blowing out to LF at Nationals Park
- WSN wins 51% of games as +120 or longer underdogs (21-20)
- WSN 48-32-0 ATS (60% cover rate) — best in MLB
- WSN leads 2026 season series vs BAL 2-1
- BAL decimated: Mountcastle + Westburg on 60-day IL, Eflin, Kremer, Bassitt all IL

Batter vs Pitcher: BvP findings (UPGRADE):

- CJ Abrams: 9 PA vs Rogers, 1.556 OPS — owns him
- James Wood: 3 PA vs Rogers, 2.000 OPS
- Trea Mead: 2 PA vs Rogers, 2.000 OPS
- Chaparro: 2 PA vs Rogers, 1.500 OPS
- Rogers is 1-3 in last 5 vs WSN with 5.09 ERA
- Alvarez has NEVER faced BAL as starter — clean slate

 **Key risk:** ESPN flagged WSN/BAL as rain risk. Check weather before betting.

Result to check June 27:

- ☐ Did WSN win? Y/N
- ☐ Did rain delay/postpone the game?
- ☐ Rogers ERA line (confirm he started)

☐ Final score

PICK 2 — MIA Marlins +102 vs STL Cardinals

Conviction: HIGH

Line at time of pick: MIA +102, STL -122

My win probability: 58% | **Market implied:** 45% | **Edge:** +13%

Key reasons:

- Max Meyer 8-0, 2.80 ERA — one of the best active starters in NL, priced as underdog
- STL starter is Dustin May 5-6, 4.30 ERA (ESPN confirmed — NOT McGreevy as BR listed)
- MIA 28-17 on road — outstanding road record
- STL Arraez out with foot contusion
- loanDepot Park dome — weather neutral (100pts)
- Owen Caissie on tear: 27.8% barrel rate, 1.012 OPS last 30 PA vs RHP

BvP note: Did not pull MIA/STL page — no BvP adjustment made. Maintain based on pitcher/record edge.

Result to check June 27:

- ☐ Did MIA win? Y/N
 - ☐ Meyer final line (IP, ER, result)
 - ☐ STL confirmed starter (May or someone else?)
 - ☐ Final score
-

PICK 3 — HOU Astros -102 vs DET Tigers (REDUCED CONVICTION after BvP)

Conviction: MEDIUM (downgraded from HIGH after BvP)

Line at time of pick: HOU -102, DET -118

My win probability: 56% | **Market implied:** 50% | **Edge:** +6%

Key reasons:

- Arrighetti ERA 3.13 (7-3) vs Montero ERA 3.68 (3-5)
- HOU 7-3 last 10 games, 18-12 last 30
- HOU leads 2026 season series vs DET 3-1
- Won last night 2-1 (series momentum)

- DET 34-47 — worst AL record

 BvP RED FLAGS (reason for downgrade):

- Riley Greene: 5 PA vs Arrighetti, 3.000 OPS — elite ownership
- Colt Keith: 4 PA vs Arrighetti, 2.000 OPS
- James Outman: 2 PA vs Arrighetti, 5.000 OPS (tiny sample)
- Arrighetti career vs DET as starter: 0-2, 17.05 ERA (6.1 IP — small but brutal)
- Montero has NEVER faced HOU as starter

BvP offset (HOU side):

- Isaac Paredes: 5 PA vs Montero, 1.800 OPS
- Christian Vázquez: 5 PA vs Montero, 1.800 OPS

Recommendation at pick time: Reduce unit size vs original. Playable but not full conviction.

Result to check June 27:

- ☐ Did HOU win? Y/N
- ☐ Arrighetti final line (did Greene/Keith damage him?)
- ☐ Montero final line vs HOU
- ☐ Final score

 PICK 4 — NYY Yankees -110 vs BOS Red Sox (ML only, no under)

Conviction: MEDIUM

Line at time of pick: NYY -110, BOS -106

My win probability: 65% | **Market implied:** 52% | **Edge:** +13%

Key reasons:

- NYY 48-32 best AL East record
- Will Warren 7-2, 3.45 ERA — excellent form
- BOS 33-46, 11-19 last 30 — poor recent form
- Warren's team 11-3 when he starts as moneyline favorite

 BvP complication — UNDER KILLED:

- Masataka Yoshida: 5 PA vs Warren, 1.350 OPS — dangerous
- Jarren Duran: 9 PA vs Warren, 1.083 OPS — solid sample, owns him
-  Under 8 REMOVED from picks after BvP review

- Warren has 9.42 ERA in last 5 vs BOS specifically (small but noted)
- BOS won last night 6-3 vs NYY — series tied

Result to check June 27:

- ☐ Did NYY win? Y/N
 - ☐ Warren final line
 - ☐ Did Yoshida/Duran hit Warren? (validate BvP call)
 - ☐ Total runs scored (would under 8 have hit?)
 - ☐ Final score
-

OVER/UNDER PICKS

O/U PICK 1 — WSN/BAL OVER 9

Conviction: HIGH (weather + BvP dependent)

Line: Over 9 (-odds TBD)

Reasons: 85°F + wind out to LF + Rogers 5.30 ERA + WSN 60% over rate (48-29-3)

 **Rain risk — game may not go 5 innings. Contingent on game being played.**

Result to check:

- ☐ Game played? If delayed, was bet action?
 - ☐ Total runs scored — over/under 9?
-

O/U PICK 2 — COL/MIN OVER 8.5 (Coors structural lean)

Conviction: MEDIUM-HIGH (structural, not BvP-driven)

Reasons: Coors Field altitude, both starters ERA 4.0+, Rockies home

TJ Rumfield (COL) 1.092 OPS vs RHP last 60 AB — hot bat

Result to check:

- ☐ Total runs scored — over/under 8.5?
-

✖ O/U PICK REMOVED — NYY/BOS Under 8

Removed after BvP: Yoshida (1.350) + Duran (1.083) vs Warren makes BOS scoring likely.

Track as ghost pick: Would the under have hit?

Result to check:

☐ Total runs — did under 8 hit? (validate BvP decision to pull it)

HR PROP PICKS (ranked)

🔥 HR PROP 1 — CJ Abrams (WSN) to HR

Approx. odds: ~+280

Conviction: VERY HIGH — best individual prop on slate

Reasons: 9 PA vs Rogers (1.556 OPS), 2-game active HR streak, 85°F + wind out, WSN hot lineup

⚠️ **Contingent on game being played (rain risk)**

🔥 HR PROP 2 — Jac Caglianone (KC) to HR

Approx. odds: +400

Conviction: HIGH

Reasons: 6 HR in last 7 games, .337/.415/.699 June slash, vs Sandlin (8.10 ERA, 2.70 HR/9, 4 HR in 3 starts)

🔥 HR PROP 3 — Paul Goldschmidt (NYY) to HR

Approx. odds: +446

Conviction: HIGH

Reasons: 5 HR in last 9 games, 2-HR game Wednesday, 8 of 14 HR vs LHP, vs Tolle (LHP) at Fenway

HR PROP 4 — Christian Walker (HOU) to HR

Approx. odds: ~+280

Conviction: HIGH

Reasons: 3-game active HR streak, 27 HR on season, vs Montero tonight

BvP note: No clean Montero BvP data for Walker but his streak speaks

HR PROP 5 — TJ Rumfield (COL) to HR

Approx. odds: ~+320

Conviction: MEDIUM-HIGH

Reasons: 1.092 OPS last 60 AB vs RHP, vs Bradley (6.19 xERA) at COORS FIELD

FADES

FADE — PIT Pirates -190

Reasons: 5-11 ATS in Skenes starts, only 2-4 at -190 or longer, paying 66% implied probability for uncertain outcome

BvP note: Did not pull PIT/CIN page — fade is based on market inefficiency, not BvP

Result to check:

- ☐ Did PIT win? (validate fade logic)
 - ☐ Did the -190 price justify outcome?
-

PARLAY PICKS

PARLAY A (core value)

WSN ML (+120) + MIA ML (+102) + HOU ML (-102)

Approx. combined payout: ~+550 for 3-leg

Result: [] All 3 hit? Y/N

PARLAY B (HR power)

Caglianone HR (+400) + Goldschmidt HR (+446) + Walker HR (+280)

High variance, high payout

Result: [] All 3 hit? Y/N

2-LEG SAFER

NYY ML (-110) + [Under removed — replace with COL/MIN Over 8.5]

Result: [] Both hit? Y/N

PROCESS NOTES FOR SELF-AUDIT (June 27)

What to evaluate:

1. **Win rate by category:** ML picks, O/U picks, HR props
2. **BvP impact:** Did the BvP downgrade on HOU prove correct? Did Yoshida/Duran hit Warren?
3. **Weather impact:** Did WSN/BAL rain risk materialize? If so, was the pick correctly avoided/managed?
4. **Streak continuation:** Did Caglianone extend to 7 HR in 8? Suzuki break streak vs Misorowski?
5. **Social/last-minute intel accuracy:** Was Schwarber scratched? Did Seager's return help TEX?

Process improvements to consider tomorrow:

- ☐ Should BvP be weighted MORE in initial probability model (not just a check after)?
- ☐ Are we appropriately discounting small-sample BvP (2-3 PA) vs large-sample (9+ PA)?
- ☐ Was the rain flag information timely enough? Could we have a dedicated weather check step?
- ☐ Should pitcher "never faced this lineup" (Montero vs HOU, Alvarez vs BAL) be a bigger positive signal?
- ☐ Was the social media scan comprehensive enough or did we miss key intel?
- ☐ Are the O/U picks structurally sound or too weather-dependent?
- ☐ How should we weight home/road splits vs overall record?
- ☐ Should Stathead BvP data be checked BEFORE win probability, not after?

Calibration check:

- High conviction picks (WSN +120, MIA +102): Should hit 55-65% of time if model is calibrated
 - Medium conviction (HOU -102, NYY -110): Should hit 50-58%
 - HR props at +280-+446: Should hit 18-26% individually — parlaying 3 has ~1% hit rate but huge EV if model right
-

KEY DATA SOURCES USED THIS SESSION

- Baseball-Reference previews (BvP tables, team splits, pitcher logs)
- RotoWire weather (June 25 data — closest available)
- ESPN MLB odds page (confirmed STL starter = Dustin May)
- FanDuel Research pages (all game-specific odds)
- NBC Sports/Rotoworld (HOU/DET pick, Astros series context)
- Covers.com HR props (Bazzana, Caissie, Rumfield angles)
- Lineups.com (Caglianone streak — 6 HR in 7 games)
- SI.com Daily Dinger (Goldschmidt, Langford, Ohtani angles)
- Breakaway Stats (current hit streaks, HR streaks leaderboard)
- ESPN Fantasy Buzz (Schwarber scratch, Seager return, weather flags)
- MLB.com News (injury updates, Soto return)
- Fox Sports Buzz (De La Cruz return, injury roundup)
